Brant S. Johnson

Product Manager | B2B Platforms, Data Products, and AI
| brantshanonjohnson@gmail.com | linkedin.com/in/brantshanonjohnson | www.brantsjohnson.com
Current: American Fork, UT | Relocating: D.C. area

Product manager with about six years of product and program work since 2017, building AI and B2B SaaS products from customer discovery. I am building Intro, agentic software for live events, directly on LLM APIs (Anthropic, OpenAI, Gemini) with embeddings and Postgres with pgvector, and Bridger, a consumer social app with 1,778 TestFlight beta users, both with Cursor and AI coding agents. At BackLocal I took two B2B SaaS products from 370+ user interviews to a revenue-generating launch, and at Crew Finance I ran the A/B experiments that cut onboarding time 50%.

WORK EXPERIENCE

Founder and Product Lead Nov. 2025 to Present
Intro (AI agent software for live events) *American Fork, UT*

- Building an AI agent for live events of roughly 100 to 600 participants, working directly with LLM APIs (Anthropic, OpenAI, Gemini), embeddings, and vector storage in Postgres with pgvector on a Supabase and AWS backend.
- Defined success as accepted recommendations and completed meetings rather than clicks, and led discovery with event operators, universities, sponsors, and enterprise prospects.
- Turned onboarding answers into structured profile data for matching, and gave every recommendation a plain-language explanation instead of an unexplained score.
- Kept direct PII out of model inputs, designed single-tenant data-isolation options for institutional customers, and wrote an AI risk framework informed by the NIST AI Risk Management Framework.

Account Executive (Product and Client Programs) Oct. 2024 to Nov. 2025
Deseret News / Utah Business Magazine *Salt Lake City, UT (hybrid)*

- Managed about 63 client relationships across 52 annual live events, from sponsorship package design and contracting through activation planning, onsite delivery, and renewal.
- Brought customer objections and feature gaps back to the product and sales teams, especially sponsors who could not measure the return on their spend.
- Started without an inherited book of prospects and grew revenue across my book of business compared with the prior period.

Senior Product Manager (first employee) Dec. 2022 to Apr. 2024
Crew Finance *Remote*

- Ran bi-weekly user testing and A/B experiments that cut onboarding time 50%, raised engagement 20%, and improved return rates 60%.
- Joined as the first employee and led product for a regulated family-banking app, shipping a Visa card payments program with PCI and COPPA requirements across engineering, design, operations, and 8 external suppliers.
- Built financial models and pricing that contributed to a $2.5M venture raise, and saved about $110K and 350+ hours by bringing design work in house.

Congressional Intern Sept. 2022 to Dec. 2022
United States Senate *Washington, D.C.*

- Handled constituent services: 50 to 200 constituent inquiries a day, with reports on constituent needs to staff.
- Condensed roughly 500 pages of nuclear licensing policy into a 2-page brief supporting budget appropriations work.

Associate Product Management Analyst Jun. 2022 to Sept. 2022
Divvy Pay (Bill.com) *Draper, UT*

- Analytics partner to 8 product managers and their teams, using product data to inform what their teams built.
- Integrated Pendo across iOS, React Native, and web; partnered with engineering on UI tagging that raised analytics data accuracy to 93%; trained 13 teams on a shared taxonomy.
- Analyzed flows and funnels to show the product managers where users dropped off and where steps could be consolidated.

Head of Product Sept. 2021 to Sept. 2022

BackLocal (Sandbox, BYU venture program) *Provo, UT*

- Led product strategy for a B2B SaaS startup from concept to a revenue-generating launch in Sandbox's 8-month program (randomly assigned team, real office space, investor pitch at the end), one of a small group of teams in the cohort to earn revenue.
- Scoped and shipped two end-user SaaS products covering point-of-sale, inventory management, manufacturing, and e-commerce workflows, managing 5 engineers and 2 UX designers in agile sprints.
- Interviewed and surveyed 370+ potential users to define the customer segment and validate demand, then ran a 7-day design sprint that compressed the path to MVP.
- Negotiated a sales partnership that raised profit margins 33% over initial projections, and combined the needs of four departments into one plan for revenue growth.

Product and Data Analyst Nov. 2020 to Oct. 2021

BYU Public Ethics Lab *Provo, UT*

- Worked with a seven-member team on research from 250 local-government interviews, using SQL and VBA to find key correlations in the data.

Product Manager Oct. 2017 to Sept. 2019

Regional Volunteer Organization (pro bono) *Birmingham, England*

- Solely designed and coded three internal reporting and analytics tools (dashboards, reporting), cutting administrative reporting time from about two days to about three hours; adoption led the organization to bring on a second engineer to help maintain them.
- Gathered requirements from volunteers and leaders, then rolled out an electronic system and drove adoption, moving about 90% of administrative workflows off paper in three weeks and tripling staff efficiency.
- Led and trained about 400 volunteers across 20+ regions on organizational standards and financial procedures, and reconciled more than £30,000 (about $37,000) in monthly operating expenses.

EDUCATION

Bachelor of Science, Business and Analysis Orem, UT | April 2025

Utah Valley University, Woodbury School of Business

Coursework Provo, UT | 2020 to 2022

Brigham Young University, Marriott School of Business

Relevant coursework: Strategy, strategy analytics, information systems, and entrepreneurship.

SELECTED LEADERSHIP

Founder and Product Lead Apr. 2025 to Present

Bridger.Social

- Built a consumer social app in React Native and Expo on Supabase and Twilio, now in TestFlight beta with 1,778 users and 230 volunteers.

Founder and Product Lead 2017 to 2023

Uintah Resilience Arch

- Raised about $100,000 and coordinated engineers, fabricators, donors, the school district, and local government to complete a community entrance arch in Vernal, Utah.

CERTIFICATIONS AND SKILLS

Product: vision and roadmaps, customer discovery and user research, KPIs and success metrics, experimentation and A/B testing, requirements and user stories, prototyping, agile delivery, cross-functional alignment

AI: LLM APIs (Anthropic, OpenAI, Gemini), agentic workflows, embeddings and retrieval with Postgres and pgvector, explainable recommendations, AI risk and PII handling, Cursor and AI coding agents

Data and tools: SQL, Python, product analytics, funnel and flow analysis, Pendo, Supabase, AWS, Next.js, GitHub, Figma

Certifications: Agile Foundations, 2022; Pendo Essentials for Web, 2022
