Brant S. Johnson

me@brantsjohnson.com | linkedin.com/in/brantshanonjohnson | www.brantsjohnson.com - American Fork, UT

Curriculum Vitae

Product manager and two-time founder working across B2B and B2C SaaS, fintech, and GovTech. First employee and product lead at Crew Finance, where I owned a Mastercard card program under PCI and COPPA requirements; analytics partner to 8 product managers at Divvy (BILL); and founder of Intro and Bridger, taking AI and consumer social products from concept to pilot and beta. Experienced in payments, compliance, AI-driven product strategy, and privacy-first design, with a track record of turning complex workflows into simple, trusted systems.

FOUNDER EXPERIENCE

Founder & Product Manager — American Fork, UT

Intro – AI event-host agent — *Nov 2025 to Present*

Product strategy

- Founded Intro, an AI-powered event-host agent that helps attendees discover, meet, and follow up with the right people at conferences, universities, and professional communities.
- Took Intro from initial concept through product strategy, interaction design, technical architecture, MVP development, customer discovery, pilots, and iterative releases.
- Defined the core thesis that AI should support human connection rather than replace it, and designed the product around the full attendee lifecycle: onboarding, introductions, meetings, follow-up, and post-event insights.
- Expanded the product from an AI matchmaking tool into a broader event-host agent covering introductions, scheduling, event information, logistics, engagement, analytics, and follow-up.
- Positioned Intro as both a standalone product and an orchestration layer for fragmented event technology (registration platforms, CRMs, event apps, messaging, matchmaking, and analytics tools).
- Developed a relationship-intelligence strategy built on a data flywheel (context, predicted relationship, interaction, outcome) that learns which introductions lead to meaningful real-world results.

AI, matching, and agentic workflows

- Designed an AI-assisted matchmaking system that ranks connections by attendee goals, backgrounds, interests, intent, and event context, surfacing a small set of high-confidence recommendations instead of large directories.
- Implemented semantic profile matching with OpenAI embeddings and cosine similarity, combined with structured profile attributes, contextual signals, configurable organizer priorities, and sponsor-aware weighting.
- Used LLMs to generate short, plain-language introduction rationales so users understand why someone was recommended instead of seeing unexplained scores.
- Built on pre-trained models and inference (OpenAI APIs, Amazon Bedrock) rather than proprietary model training, keeping infrastructure lean while differentiating on workflow and data.
- Developed an agentic architecture in which the event host coordinates introductions, scheduling, recommendations, logistics, reminders, and follow-up, moving users from recommendation to action.
- Explored integrations with CRM, event-management, registration, communications, and badge-printing systems, and evaluated integration or replacement opportunities with established platforms including Swoogo.
- Evaluated AI outputs on whether they improved human outcomes rather than on engagement alone, and explored personality, professional intent, and relationship objectives as additional matching signals.

Technical product leadership

- Led product development across Next.js, React, TypeScript, Supabase (Auth, Database, Storage, Edge Functions), Vercel, AWS, and OpenAI APIs, owning frontend, backend, AI, data-modeling, analytics, and infrastructure decisions as founder-PM.
- Designed APIs and data models for users, profiles, events, recommendations, connections, messaging, RSVPs, and analytics, with TypeScript/Deno server-side functions for matching workflows.

- Planned infrastructure evolution toward AWS CloudFront, WAF, Lambda, RDS, Cognito, Bedrock, KMS, VPC, and PrivateLink to support larger institutional and white-label deployments.

Privacy, security, and responsible AI

- Defined security and privacy requirements alongside product requirements, minimizing collection of sensitive data so grades, health and financial information, demographics, and student IDs never need to reach the AI model.
- Separated direct identifiers from AI inference context using tokenized participant identifiers and derived trait vectors, with private inference over AWS VPC and PrivateLink and encryption and key management built into the architecture.
- Designed dedicated single-tenant database options for institutional customers with higher data-isolation requirements.
- Developed an AI risk framework informed by the NIST AI Risk Management Framework, with user-level opt-in controls for each category of AI-supported matching.

Organizer and attendee experience

- Designed organizer workflows to create and configure events (schedules, sessions, locations, virtual events, cover assets, attendee settings, networking preferences), launch AI matching, and switch individual AI features on or off by event type.
- Built low-friction joining through QR codes, join codes, and shareable links so attendees can onboard at live events without installing an app in advance.
- Designed a short onboarding flow that captures goals, background, interests, and desired outcomes, plus profiles, connection tools, blocking controls, event discovery, RSVPs, Q&A, and messaging concepts.
- Designed real-time and post-event analytics around connection outcomes, defining metrics for profile opens, recommendation engagement, match acceptance, meeting completion, RSVP conversion, messages, qualified leads, and system latency.
- Added shareable, personalized infographic recaps as a post-event engagement feature.

Customer discovery, pilots, and go-to-market

- Conducted customer discovery with event operators, business organizations, universities, sponsors, and prospective enterprise users, and used the findings to broaden Intro from matching into a full event-host agent.
- Shipped changes directly from customer feedback, including scheduling, configurable event features, analytics, and personalized recaps, and ran live product demos for prospective B2B customers.
- Received external validation from an Endeavor B2B EVP, who described the product as intuitive with a clear value proposition and feature set during an Aug 2026 evaluation.
- Tested early versions with approximately 10 users at UVU, and designed institutional pilots around measurable questions: whether recommendations are accepted, introductions occur, and meetings are completed.
- Developed pilot and deployment plans for university cohorts, orientations, entrepreneurship, career, and student-success programs, sized for audiences of approximately 100 to 600 participants.
- Pursued pilots and event opportunities including Forward, Friday, Begin Again, STACKED Summit, and Utah Business-related communities, and explored sponsor partnerships including Ampleo.
- Built an institutional go-to-market motion across conferences, chambers of commerce, universities, and professional communities, positioning organizers as both customer and distribution channel.

Business model

- Designed three per-attendee pricing tiers aligned to increasing capability, with a free entry point for events of roughly 30 attendees or fewer.
- Explored annual enterprise contracts, event-level pricing, sponsorship revenue, analytics, and white-label deployments as complementary revenue models.
- Framed sponsor ROI around introductions, attended meetings, and qualified leads rather than impressions, and positioned Intro as a B2B wedge in which organizers fund acquisition while attendees receive immediate value.

Founder & Product Manager American Fork, UT
Bridger (consumer friendship app and social co-op) *Apr 2025 to Present*

Product vision

- Founded Bridger, a consumer friendship product designed to strengthen existing relationships, form new friendships, and increase real-world connection as an alternative to attention-maximizing social media.
- Took Bridger from product thesis through brand, interaction design, technical architecture, mobile development, beta distribution, and TestFlight testing.
- Structured Bridger as a social co-op in which users are members rather than advertising inventory, exploring member ownership, governance, transparency, voting, and economic participation.
- Positioned Bridger as the consumer counterpart to Intro: Intro helps people meet in structured settings, and Bridger helps those relationships persist and turn into shared experiences.

Mobile development and engineering operations

- Built Bridger as a React Native/Expo app for iOS and Android on a dedicated Supabase backend, using Expo EAS for builds, distribution, and over-the-air updates.
- Shipped Bridger to TestFlight and organized a live tester launch; October 2026 career records document 1,778 users and approximately 230 volunteers participating in the early product effort.
- Integrated authentication, messaging, analytics, Stripe payments (from sandbox toward production readiness), and CI/CD through GitHub Actions, and implemented and iterated on iOS Universal Links and deep links.
- Worked through real deployment constraints, including EAS build limits, CI failures, TestFlight distribution, and production configuration, and used each failure to strengthen release processes.
- Established CODEOWNERS, protected-path controls, secret scanning, and review requirements, plus a shared agent hub with risk-tiered processes for AI-assisted code changes and required founder review on higher-risk changes, including a documented 34-file pull request.
- Documented a breach-ready encryption architecture and configured development environments and internal documentation for AI-assisted engineering.

Identity and privacy

- Designed phone-first authentication with Supabase SMS OTP and Twilio, using E.164-normalized phone numbers as a stable identity and merge key, and kept legacy Google, Apple, and email sign-in behind feature flags during the transition.
- Built server-side account-merge logic that carries pre-signup relationship context (private notes, drafts, and connection records in author-scoped pending_people data) into newly authenticated accounts.
- Implemented Twilio A2P 10DLC messaging and consent flows for production messaging.
- Avoided address-book uploads entirely, basing friend discovery on explicit user actions without creating a central copy of users' contacts.
- Built privacy controls and privacy education into first-run onboarding, and set user-owned data principles, including no third-party sale of personal data.

Social graph and mechanics

- Designed the network around reciprocal, real-world friendships, requiring users to start from at least one real friendship, with privacy circles (inner, middle, and outer bridges) and an explored 150-close-friend cap.
- Developed friend-of-friend discovery and introductions that use mutual relationships, shared interests, and personality as context, including quizzes, DUO compatibility results, and optional Big Five, MBTI, and Enneagram inputs.
- Designed finite experiences in place of infinite scroll, including a daily experience capped at around 25 people, intentional prompts, and no public follower counts, and explored versions without search or direct messaging.
- Defined success as real-world coordination, treating closing the app after making an offline plan as a positive outcome rather than lost engagement.

Scrapbooks, media, and real-world plans

- Designed Scrapbooks as the core social format, with 1 to 4 photos per experience, approximately 20-second voice memories, stickers, people tags, location and map paths, automatic layouts, collaborative event scrapbooks, and printable 8.5 x 11-inch exports.
- Built and redesigned a weekly recap player with background audio, and developed dynamic-image systems for presenting memories.

- Developed Touch Grass, a product area that combines friendship context, preferences, availability, location, budget, and interests to recommend plans people can do together, supported by weekly offline activities.

Onboarding, activation, and analytics

- Replaced a rigid multi-card onboarding tour with adaptive onboarding that teaches privacy and co-op principles, asks what kind of friendship a user needs, requires only name, photo, and birthday up front, and personalizes Home.
- Explored activation mechanics including joining the co-op and a three-friend invite threshold for unlocking network value.
- Instrumented onboarding branches, co-op engagement, invitations, and account merges (including pending_person_merged events), and designed empty states for new users with little network data.
- Iterated on navigation, onboarding, privacy, media, and social mechanics from beta feedback and observed behavior, preserving earlier onboarding versions for demos.

Co-op governance, business model, and brand

- Designed a co-op governance hub with one-member, one-vote concepts, member proposals, beta voting, and permissions for anonymous, authenticated, and verified members.
- Drafted a charter and governance roadmap for moving authority from founder-led development to member participation, with role and compensation frameworks and economic simulations of ownership and revenue structures.
- Developed a business model around coordination, experiences, memberships, and transactions rather than attention, including paid co-op membership, local experience bookings and ticketing, local business partnerships, and city-level Circles.
- Modeled an Intro-to-Bridger acquisition loop with a 15 to 20% conversion target as a planning assumption, so B2B event revenue can support a consumer product with less reliance on advertising.
- Created the Bridger visual system (flat neo-brutalism, pixel and Windows 95-inspired interactions, keystone-style “B” brand mark) and reusable design components across onboarding, profiles, scrapbooks, discovery, planning, and co-op features.

PROFESSIONAL EXPERIENCE

Account Executive Hybrid

Utah Business Magazine *Oct 2024 – Nov 2025*

- Managed approximately 63 client relationships across a portfolio of 52 annual live events, advising on sponsorship opportunities and 25+ marketing products including print, digital, SEO, television, and radio.
- Partnered with agency teams to design and execute integrated campaigns, providing front-line insight into what businesses actually spend money on and what drives results
- Gained firsthand experience with sales quotas, CRMs, and outreach tracking, strengthening my ability to collaborate with and interview sales teams as a product manager
- Developed sharper marketing strategy skills by identifying patterns in client success, quickly spotting gaps, and understanding when product quality, not messaging, drives outcomes
- Advocated for tighter collaboration between sales and product teams by translating customer objections, hesitations, and feature feedback into actionable insights
- Used tools like Monday.com to manage campaigns and workflows, staying organized across diverse offerings and sharpening a process-driven mindset

Senior Product Manager Hybrid

Crew Finance *Dec 2022 – Apr 2024*

- Spearheaded a comprehensive product strategy, operations, & go-to-market plan, resulting in significant savings of over $110,000 & 350+ hours by strategically internalizing illustration & visual design work, demonstrating a keen ability to reduce costs while maintaining high-quality brand aesthetics
- Leveraged lean startup methodology & design sprints for rapid product iteration & development, exemplifying mastery of agile practices to accelerate product launch timelines & adapt quickly to market feedback
- Oversaw 8 suppliers to create a Mastercard card program, while cutting costs & ensuring efficiency in supplier management

- Developed a resonant & visually compelling brand narrative through understanding market trends & consumer psychology, enhancing brand clarity and engagement
- Directed packaging & UX design, leading to substantial improvements in the unboxing experience & user satisfaction, showcasing a customer-centric approach to design thinking, enhancing the product's appeal & fostering brand loyalty
- Increased engagement by 20% by incorporating customer feedback into the product, resulting in a 60% return rate improvement
- Created a dynamic digital strategy & startup marketing plan, effectively amplifying the online presence & engagement
- Designed cross-channel marketing efforts, including SEO, content marketing, & social media campaigns, to drive brand visibility & engagement
- Redesigned the company website & orchestrated social media marketing initiatives, boosting customer engagement through targeted content creation & community building on platforms like Instagram & Facebook
- Led meticulous product design & development, ensuring a seamless & captivating user interface that utilized advanced tools like Figma & Adobe Suite to create intuitive designs meeting user needs & exceeding market expectations
- Integrated rigorous user experience testing, ensuring precise product-market fit by implementing regular, bi-weekly user testing sessions to gather actionable insights for iterative design improvements
- Ran biweekly user testing and A/B experiments that cut onboarding time by 50%, making the regulated family-banking product faster to adopt.
- Conducted indispensable financial analysis pivotal for securing $2.5 million in venture capital funding, demonstrating expertise in financial modeling & pitch deck creation, successfully articulating the startup's value proposition to investors
- Orchestrated financial operations & maintained regulatory compliance within the fintech landscape, navigating complex regulations like COPPA to ensure product integrity & trust
- Optimized supply chain, resulting in a 15% reduction in operational expenses & a 22% increase in delivery speed, involving 8 key suppliers through strategic negotiations & process reengineering
- Implemented project management methodologies to streamline workflows & ensure timely completion of product milestones
- Cultivated a culture of innovation & diversity, aligning team endeavors to company values
- Coordinated program management endeavors, facilitating streamlined & effective execution
- Led cross-functional teams in synchronizing efforts towards common goals, enhancing team productivity & project outcomes
- Formulated strategic roadmaps grounded in comprehensive market analysis & invaluable feedback, guiding the product's evolution & ensuring alignment with long-term business objectives
- Leveraged Carta for meticulous equity management, fostering transparency & flexibility in stakeholder involvement throughout the startup's growth phases

Performer in "Elf: The Musical" Sandy, UT

Hale Centre Theatre *Aug-Dec 2023*

- Joined one of Utah's most prestigious theatres known for its world-class productions and high-caliber performances after being nominated as one of the top ten best actors in the state by UHSMTA
- Successfully performed in the 4th most sold-out performance in Hale Centre Theatre history under the challenging choreography of a member of the Rockets
- Portrayed a gay character in a role that was controversial within the community, showcasing my ability to handle confrontation and navigate complex issues, especially as a member of the LGBTQ+ community
- Worked with management to uphold the organization's values while ensuring representation was not diminished

Constituent Services Washington, D.C.

Office of Senator Mitt Romney *Sept-Dec 2022*

- Synthesized complex nuclear licensing policies into a succinct 2-page document to support strategic budget appropriations, showcasing analytical & summarization skills

- Efficiently managed 50-200 daily inquiries, providing insightful analytics on constituent sentiment & needs, demonstrating strong organizational & data analysis capabilities

Associate Product Management Analyst Hybrid
Divvy Pay/Bill.com *Jun 2022 - Sep 2022*

- Served as the analytics partner to 8 product managers and their teams, using product data to help them define product scope and decide what to build.
- Integrated Pendo across iOS, React Native, and web, and partnered with engineering on UI tagging that raised analytics data accuracy to 93%.
- Analyzed flows, funnels, and usage patterns to show the PMs where users dropped off and where steps could be consolidated, and surfaced patterns that informed tiered feature pricing.
- Trained 13 cross-functional teams to interpret product analytics and built a shared Pendo taxonomy so teams tracked behavior consistently.

Head of Product Remote
BackLocal (Sandbox, BYU venture program) *Sept 2021-Sept 2022*

- Spearheaded product strategy from conceptualization to a successful revenue-generating launch, employing agile methodologies to navigate the SaaS product development lifecycle with efficiency & adaptability
- Orchestrated a 7-day design & ideation sprint, rapidly validating product-market fit & expediting the development of a Minimum Viable Product (MVP) for early market entry, showcasing agility & market responsiveness
- Managed a team of 5 engineers and 2 UX designers to create a new subscription model focused on B2B sales, streamlining product development for faster market impact
- Led a cross-functional team comprising UX designers, software engineers, & visual designers in a dynamic agile environment, resulting in the delivery of a functional MVP that catered to initial customer feedback & demand
- Utilized agile methodologies to streamline SaaS product development, leading to 90% growth in retention and satisfaction rates
- Negotiated a lucrative sales partnership, achieving a 33% increase in profit margins over initial projections, demonstrating advanced negotiation skills & strategic foresight in business development
- Instrumental in securing business approval within a mere 15 minutes over the phone, underscoring rapid decision-making capabilities & persuasive communication
- Interviewed & surveyed over 370+ potential users to accurately define the customer segment & verify market demand, ensuring the product's alignment with user needs & expectations
- Integrated the needs of four distinct departments to formulate a cohesive & realistic strategic plan aimed at amplifying revenue generation & expanding market share, exemplifying adeptness in cross-departmental coordination
- Pioneered the development of two end-user SaaS products focused on optimizing point-of-sales systems, inventory management, manufacturing processes, & e-commerce efficiency, reflecting a deep understanding of market needs & operational improvement
- Orchestrated design sprints to rapidly validate product-market fit, expediting the development of an MVP and ensuring timely market readiness
- Maintained consistent engagement with both internal & external stakeholders, providing weekly updates on team progress, market trends, & strategic objectives, thereby ensuring aligned efforts & unified vision

Marketing Analyst Salt Lake City, UT
FranklinCovey-Scott J. Miller VP of Thought Leadership *Jan 2021-Dec 2022*

- Managed content for the world's largest leadership podcast, reaching over 1 million weekly subscribers, demonstrating effective content strategy & management skills
- Utilized LinkedIn Navigator to generate 85,000 leads for a new online entrepreneurial business course, showcasing adeptness in digital marketing & lead generation
- Surpassed lead generation targets by producing four times more leads per hour than peers, achieving an exceptional promotion rate for book launches through innovative marketing strategies

Product & Data Analyst Provo, UT
Master of Public Administration-BYU Public Ethics Lab *Nov 2020-Oct 2021*

- Overhauled 75% of a major research project to prioritize key performance indicators, finding critical data correlations using SQL & VBA, enhancing the project's strategic impact
- Redesigned project's website managing their SEO, domains, and contact forms to accommodate strategic growth plans
- Collaborated with a seven-member team to refine research from 250 local government interviews, applying advanced data analysis techniques to distill actionable insights
- Analyzed & modeled sentimental trends within qualitative data, contributing to a deeper understanding of local government dynamics & public sentiment

Communication & Marketing Intern Salt Lake City, UT
Governor's Office of Economic Development *July -Dec 2020*

- Supported statewide COVID-19 awareness campaigns, delivering vital information & resources to Utah businesses, showcasing adaptability & crisis communication skills
- Assisted in planning & executing the 2020 Utah Economic & Energy Summit, contributing to the promotion of state economic goals & energy initiatives
- Managed 13 communication channels, significantly enhancing the state's economic stimulus visibility & ensuring accurate public messaging
- Advised 950 businesses on navigating federal grant guidelines to formulate effective COVID-19 strategies, enhancing business resilience & community health

Constituent Intern Salt Lake City, UT
Utah Governor's Office *Sept 2019-Dec 2020*

- Organized & documented constituent correspondence & the Governor's appointments, ensuring efficient office operations & stakeholder engagement
- Prepared for high-profile meetings by compiling briefing sheets, coordinating logistics, & facilitating smooth interactions between constituents & state officials
- Conducted tours & liaised with various state departments, promoting transparency & public engagement with governmental processes

Verification Specialist Murray, UT
HealthLift *Sept 2019-June 2020*

- Liaised daily with insurance companies, healthcare providers, & patients, ensuring accurate & timely verification processes, demonstrating strong communication & organizational skills
- Maintained compliance with HIPAA laws, upholding patient privacy & data security standards
- Motivated team members through positive leadership, enhancing team performance & morale

Marketing Assistant Vernal, UT
Uintah County Travel & Tourism *Mar-Oct 2017*

- Actively promoted & supported the organization of the 2017 Utah Symphony & Opera Performance at Dinosaur National Monument, attracting thousands of attendees & enhancing community engagement
- Spearheaded the coordination of the annual, three-day, state-wide 2017 Utah Tourism Conference, demonstrating exceptional event planning & execution skills
- Effectively marketed Uintah County's weekly events & promotions using an integrated mix of social media, radio, & television channels, significantly increasing public participation & awareness
- Collaborated with 14 regional hotels to coordinate on upcoming events, successfully increasing tourism spend & fostering local economic growth through strategic partnerships & community involvement

Executive Intern Vernal, UT
Vernal City *May 2016 -Jan 2017*

- First ever intern to work for the city manager, collaborating with municipal departments on key initiatives and gaining firsthand experience in local government operations
- Participated in community development projects & served on a health & well-being board managing $250K of grant funding, demonstrating civic engagement & project management skills
- Conducted research & developed government policies, contributing to local governance & community improvement initiatives

LEADERSHIP & SERVICE

Organization Assistant Salt Lake City, UT
TEDxSaltLakeCity *Jan-Sept 2021*

- Directed the organization & management of monthly meetings, optimizing for efficiency & effective follow-ups.
- Implemented structured agendas & actionable minutes to ensure clear objectives & accountability, significantly enhancing team productivity & project timelines
- Conceptualized & designed compelling brand creatives to promote key events, employing a mix of Adobe Creative Suite & digital design principles, leading to increased event visibility & engagement, showcasing a blend of creativity & marketing acumen
- Systematically enhanced volunteer engagement & commitment through strategic communication & reminders by utilizing a mix of personalized outreach & automated tools to boost task completion rates to 95%, demonstrating exceptional volunteer management & motivational skills
- Developed & executed a creative funding strategy that successfully raised an additional $85K in donations for the 2023 event, marking a 60% increase from previous years, by employing a combination of digital marketing, social media campaigns, & community engagement to reach & exceed fundraising goals
- Leveraged G-Suite tools to streamline team coordination & task completion processes. Implemented automated notifications & reporting features to keep team members informed & on track, leading to a significant increase in the completion of team tasks, which improved team efficiency & fostered a culture of transparency & accountability

Trip Leader Hilo, Hawaii
Humanitarian XP *May-Aug 2021*

- Coordinated 22 youth to build a home with Habitat for Humanity for a series of 10 days
- Planned cultural, social, self-development, & service activities daily that would be reevaluated based on health, weather, & demand
- Managed the flight schedules of 22 youths & proceeded to navigate them through strict COVID protocol

Product Manager Birmingham, England
Regional Volunteer *Oct 2017-Sept 2019*

- Trained and supported approximately 400 volunteers across 20+ regions on organizational standards, financial procedures, and reporting workflows.
- Conceptualized & executed impactful quarterly marketing campaigns, successfully reaching thousands, demonstrating adeptness in campaign design & audience engagement
- Leveraged advanced troubleshooting skills to improve internal communication, actively listening to & addressing volunteers' feedback, fostering a collaborative environment
- Managed & meticulously recorded over £30,000 ($37,000) in monthly expenses, ensuring financial integrity & accountability within the organization
- Significantly boosted office & volunteer staff efficiency threefold by transitioning the organization to a 90% electronic system within three weeks, showcasing strong change management & digital transformation skills
- Established & consistently met ambitious short & long-term organizational goals across 20+ regions, aligning team efforts & optimizing regional operations

Public Relations Director & Performer Provo, UT
Young Ambassadors - International Musical Theatre Company *Apr 2021-May 2023*

- Achieved a remarkable 2,270% increase in content interactions through strategic social media campaigns on Facebook & Instagram, demonstrating expertise in content optimization & audience engagement
- Successfully expanded the user base to over 3,100 followers, marking an 860% growth within just four months, by implementing targeted growth strategies & engaging content plans
- Spearheaded a comprehensive rebranding initiative across six promotional channels, collaborating effectively with a diverse team of 9 professionals & 2 directors This effort resulted in a unified brand identity & enhanced market presence, showcasing strong leadership & project management skills
- Performed alongside Tony Award winner Brian Stokes Mitchell for an audience of 20,000+, showcasing talent in performing arts & the ability to engage with large audiences
